## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Patel (US Patent 4,397,315) in view of Kozak (US Patent 3,871,376).

4. Regarding claim 1, Patel discloses a bandage for providing a cooling effect to a user comprising a liquid impervious cold pack container (18), first and second bandage support members (46) integrally attached to the cold pack container, and at least one chemical agent (20) and one solution (24) that undergo an endothermic reaction when mixed. The cold pack comprises means for separating the chemical and solution (22) which is easily broken or ruptured to allow mixing (column 2, lines 44-55). The bandage also contains a portion adapted for contact with the area of the body to be covered by the bandage, which is inherently sterile since it is a dressing used for treatment of

sensitive tissue. Patel does not disclose that the two bandage support members are attached to the body by adhesive, but is held in place by the use of a belt. Kozak however teaches a dressing including a cooling device in which the support members (12 and 13) have an adhesive portion for affixing the bandage to the body of said user (column 4, lines 3-6). It would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the bandage disclosed by Patel having adhesive, as taught by Kozak, to allow attachment of the bandage to the user's body without the use of an extra part or belt.

5. Regarding claim 2, the subject matter is claimed conditionally and therefore need not be present. One could spray an anesthetic or other medicament on the bandage of Patel.

6. Regarding claim 3, the separating means include a frangible member (22), the chemical is provided in solid form, and the solution is water (column 2, lines 2-6).
